About Myself

"Highly motivated, proactive, committed, innovative, talented with a wide knowledge base and a relentless work ethic" are a few of the phrases my managers, stakeholders, and superiors have used to describe me. What I may lack in experience, I make up for with a degree of adaptability and neuroplasticity. I tend to naturally play a key role in fostering an inclusive and fun team environment, always prioritizing the success of the team.

For the past three and half years, I've been accelerating my career at the heart of data-driven innovation at Rabobank. If you'd like to hear more about my journey, check out this podcast on Spotify we recorded with Rabobank's CITO: Alexander Zwart, where we explore my background, experiences, projects and insights.

Education

BSc Computing Science / Radboud University Nijmegen

Sept 2019 – Sept 2022

- Minor: **Artificial Intelligence,** Tracks: **Data Science & Cyber security**
- **Thesis topic:** Automated Tongue Image Analysis for autoimmune disease detection with supervised machine learning models: (Grade: 9/10).

Honours Academy of Science at Radboud University/Radboud University Nijmegen

Sept 2020 – June 2022

I was selected by the university's academy of science to parallelly be a part of the two-year honors program where talented and motivated students dive deeper into **scientific and technical research**. This program is a **specialized research incubator** that supports and facilitates students building proposals/thesis by providing academic training and funding under the mentorship of esteemed experts and organizations around the world.

Working experience and internships

Machine learning engineer II / Rabobank

Oct 2022 – Present

CITO | Data Analytics Products Tribe | Area Enterprise Analytics Products | RATE domain | TIX squad

As a **"T" shaped Machine Learning Engineer** in the TIX squad, we optimize and build transaction models in a MLOps environment. I spend 70% of my development bandwidth on data/model engineering, and the rest on data analysis.

Enhanced Loan Approval: We designed, developed and deployed categorization, pattern recognition and automated transaction report models for better loan decisions and over-crediting prevention, saving the bank over €80 million last year and streaminling 70% of buisness loans and credit applications within 15mins.

Techstack: Python, Azure ADF/AI/portal, CI/CD pipelines, SQL, Airflow, Azure OpenAI, Model dev and testing, robust data analysis in OneLab/Open!Lab, Kong, Unit testing, PowerBI, Databricks, Compliancy/Model validation

Computer Vision Research intern/ Ca' Foscari University of Venice

Feb 2022 – March 2022

Implemented a **Generative adversarial neural network**, several machine learning concepts, and produced a relaxation labeling algorithm that allows real-time applications to solve real-life jigsaw puzzles in quasilinear complexity. Experimenting with various generative approaches to reduce this to linear time.

Honors, Awards and Other Responsibilities

- **High Potential Employee:** Awarded to the top 5% within my department for exceptional career growth and impact.
- **Well Being Champion:** Responsible for mental health awareness and initiatives in the Rabo data science area.
- **Sustainability advisor:** Reviewed agri-finance initiatives and advised the Rabobank's NA sustainability team.
- Received the **honors grant of science** worth 6000 euros by the Radboud Honours Academy to facilitate my research.
- **9.4 CGPA** in the AISSE exams and won the Indian national IIT Kharagpur **Cyber Security examination** with 94%.

Tech stack & Certifications

- Proficient in **C++, Python,** and **Java** programming languages, **git** and **Docker**.
- Proficient in building within **Azure**. Built and deployed several building blocks using **CI/CD Azure pipelines**, Azure data factory, & Airflow.
- Intermediate experience and in-depth knowledge of **tensor flow**, machine learning, MDPs, reinforcement learning, **neural network architectures**, and modern AI concepts.
- Skilled in leveraging **OpenAI APIs, LangChain, LangGraph, Chroma Vector DB, RAGs** and similar end-2-end technologies to design and deploy impactful **AI-driven solutions.**
- Strong affinity with **Power platform** technologies and **PowerBI**. Deployed several diverse Rabo projects in prod.
- Licensed **RapidMiner Data engineer** Professional.
- **Data Mining**, analysis, and warehousing in **Azure data bricks** on voluminous datasets.
- Well rounded with front-end technologies (**CSS, HTML,js**) and design architecture.
- In-depth knowledge and experience in git, Django, AGILE methodology, and SCRUM teams.
- Vast experience in unit testing, A/B testing and performance testing.
- Stanford Online certified with DBMS and SQL concepts.
- Fluent in **presenting**, story telling and public speaking in the English language.
- Algorithm development, optimization, and implementation.

Completed Projects

Code Compass AI -Rabobank/October 2025

Code Compass AI is a secure, agentic assistant embedded within Databricks, designed to help developers understand, navigate, and optimize notebooks across your entire repository. It combines Azure OpenAI, LangChain, and Chroma vector-based retrieval to deliver context-aware, persona-tailored explanations of code and technical concepts, without accessing any production data.
This project won the award for the **most viable innovation** in the 2025 DAPT Innovation challange and is currently in talks to be scaled to the rest of the bank via the GenAI4Squads and GenAIAcceleration program.
Role: Idea owner and AI engineer.

Rabobank Young Engineering Professional Program (YEPP)/ April 2023- June 2024

- **North American Sustainability Platform:** Flown to Chicago and St.Louis by the Rabo North American sustainability team to revamp, automate, optimize, and deploy a compliant carbon score calculation and management application in the power platform within a 3-week timeframe.
  Role: Solution architect and ML engineer
- **Automated Loan Prospecting Dashboard:** Created an automated Power BI loan prospecting dashboard and front end that captured the entire Dutch startup and scale-up market for the Rabo Startup and Scaleup team. Live demoed at the Data Science in Finance Conference (**DSFC 2025**)
- **Role:** Product owner and ML engineer

ATIA: Automated Tongue image analysis for autoimmune disease detection using supervised machine learning models/Dec 2021 - August 2022

My BSc and Honors thesis found the best-supervised machine learning / deep learning model that can accurately diagnose auto-immune diseases by conducting automated image analysis on tongue images.

UK accident-prone zone detector using DBSCAN and Kmeans /Nov 2020- Jan-2021

Created a python based program that identified areas in the UK where the chance of accidents is high. Analyzed two sets of UK traffic-accident data containing over 1.6 million entries and successfully implemented **DBSCAN, a custom-designed (Harmonic) K-means clustering algorithm**, and various noise/outlier removal techniques to accurately identify seven areas that are accident-prone. Grade: 9.0 / 10.

Developing an in vitro lung tumor organoid-on-chip model with automated microscopy and data analysis for immunotherapy drug testing on squamous cell lung cancer / Sept 2020 - June 2021

Proposed, defended, and published a tumor-on-a-chip model with **efficient data analysis strategies** using modern technologies and methodologies to help create a better interface for squamous cell cancer drug testing. This was my first-year honors project of science.
Research Gate Publication **DOI:10.13140/RG.2.2.29432.57608.**
