Performance report, recommendation and feedback for:

Vamsi Yerramsetti (Employee ID -00555374)

Machine learning engineer, Area Enterprise analytics products, RATE domain, TIX squad

July 8th 2024

During the month of June 2024, Vamsi worked for the North American sustainability team on the second Young Engineering Professional Program (YEPP) business case assignment. Vamsi's role consisted of taking up the responsibilities as the **team's software architect and engineer**. The team's purpose was to revamp, automate, and optimize the carbon score calculations of Rabo farmers within the North American sustainability team's portfolio. This involved the calculation, storage, and transformation of carbon scores for farmers, providing them with detailed insights. Vamsi and his team were flown to St Louis and given a three-week timeframe to design, build, deploy, test, and deliver the application. Vamsi led efforts in the design of the entire application and developed core fundamentals across the entire application.

Vamsi demonstrated a great degree of professionalism, knowledge, and adaptability with this project. He presented himself as a natural team leader and was able to maintain optimism through uncontrollable project changes. He has an ability to successfully operate in a professional environment and interact with stakeholders (both internal and external), making him great fit to lead development teams.

Vamsi has a way of working that is very engaging for the client. He does this to ensure the final product meets the clients needs. For example, anytime there was a change to the product flows, outputs, or general design, Vamsi ensured we were aware, and able to provide our input promptly. Additionally, Vamsi was pragmatic with deliverables. He was aware of his own and his team's capabilities, so he was able to realistically convey what was possible with the final product and what was not.

Vamsi has both hard and soft skills, making him an ideal team member and project leader. His passion for his work is noticeable and translates into the project development process. I highly recommend Vamsi for projects that are complex and/or result oriented. He gets the job done.
