Sub: Letter of recommendation

While I am honored and delighted to offer my highest recommendation for Sai Vamsi Krishna Yerramsetti, a part of me pains to see him go, as he has proven to be an indispensable asset to the bank.

In my career of more than 30 years, during which I have held various positions, including that of manager, Vamsi stands out among the many talented and driven individuals I've met. He has constantly impressed me with his deep technical expertise, proactive approach, and exceptional project management skills. Joining as the youngest member of the data science and innovation team, Vamsi has become a strong asset within Rabobank in just two years. He has taken on various vital roles, making significant impacts on multiple data science and machine learning projects, which earned him the highest performance rating in his yearly review.

Vamsi's base team develops, applies, and deploys machine learning models that enhance decision-making in approving large credit loans. His involvement and input have been pivotal in the performance and versatility of the models currently in production. I would describe Vamsi as a "T-shaped" developer. He has deep expertise in building and applying predictive models while supplementing it with a broad knowledge base and analytical skillset, enabling him to troubleshoot, reason, and justify certain techniques and patterns. Vamsi has an unparalleled work ethic and exceptional focus. While working as a Machine Learning Engineer, he also took on the role of Product Owner for the Start-up & Scale-Up Banking team, demonstrating his leadership and technical expertise. They built an automated predictive dashboard for optimal loan prospecting within the Dutch startup and scale-up market. Vamsi led two cross-functional teams in creating this automated dashboard, providing necessary insights into the Dutch startup and scale-up market for loan prospects. His leadership and strategic thinking were vital in completing this challenging project within the given timeframe. He has been a strong advocate for innovation, particularly in leveraging artificial intelligence to spearhead sustainability initiatives. Vamsi was flown to the Midwest USA with a team of young engineering professionals, where they designed and implemented a cutting-edge predictive model that calculated carbon emissions and provided invaluable insights for Rabo farmers.

During my time with him, Vamsi has always been committed to his self-improvement and professional growth, showcasing an impressive learning curve. Besides these two projects and his daily work with his team, he was always committed to taking on more training to improve his technical expertise in the field of machine learning and data science. In addition to his technical abilities, Vamsi always brings a fresh perspective to the table with his positive demeanor, problem-solving skills, and sense of accountability to every project. He always puts his team first and works constructively by establishing a periodic feedback loop with his peers. He is extremely reliable and a team-oriented professional.

Annemieke van Nuland,

Talent Manager, Coöperatieve Rabobank U.A.

For more information on this subject, please do not hesitate to contact me at +31 6 22697559 or by email at *annemieke.van.nuland@rabobank*.nl.
I would be happy to elaborate further on my time working with him. LinkedIn: https://www.linkedin.com/in/avnuland/

I am highly confident that Vamsi will bring an outstanding technical skillset and growth-oriented mindset to your university. Just as he stood out at Rabobank, I'm certain he will excel in your program.
